Tetralogy of Fallot

Child Health | Cardiovascular

REMEMBER IT AS

Think PROVe

- **P - Pulmonary stenosis**
  Narrowed outflow from the right ventricle.
- **R - Right ventricular hypertrophy**
  The right ventricle thickens from pumping against resistance.
- **O - Overriding aorta**
  The aorta sits over the septal defect.
- **Ve - Ventricular septal defect**
  A hole between the ventricles lets blood shunt right to left.

NURSE TIP

During a 'tet spell', place the child in a knee-chest position.
