MEMORY TRICK

# Who Do You See First?

Management of Care | Prioritization

REMEMBER IT AS

## ABCs, then Acute, Actual, Unstable

- **Airway, Breathing, Circulation**
  Physiological threats come first.
- **Acute over chronic**
  A new change outranks a long-standing problem.
- **Actual over potential**
  A real problem outranks a risk.
- **Unstable over stable**
  Unexpected findings outrank expected ones.

---

**NURSE TIP**

An expected finding for the diagnosis is rarely the priority.
