Magnesium Sulfate Toxicity

Maternal & Newborn Health | Antepartum

REMEMBER IT AS

Check the 'reflexes, respirations, urine' trio

- **Reflexes**
  Loss of deep tendon reflexes is an early sign of toxicity.
- **Respirations**
  Respiratory rate below 12/min is a warning sign.
- **Urine**
  Output below 30 mL/hr lets magnesium build up.
- **Antidote**
  Calcium gluconate at the bedside.

NURSE TIP

Stop the infusion first, then notify the provider.
